Ref: 0321909.docx, 0321910, Substitution MKU45 with MKY45..UC Rev.00

To whom it may concern

Statement about the substitution of the explosion proof solenoid MKU45 with the new MKY45../UC

The flameproof encapsulated MKU45-solenoid-series will be replaced with a new variant of the MKY45-series named ../UC with certification for North America and Canada. Technically the wattage L17 is replaced with L15, this without restrictions in the valve performance. All other wattages are replaced with identical ones. Due to different type codes, a direct replacement of the MKU-series needs also the option M187 on the MKY-series as follows, i.e.:

MKU45/18x60-G24/L17 is replaced with MKY45/18x60-G24/L15-M187/UC #2

MKU45/18x60-R115/L17 is replaced with MKY45/18x60-R115/L15-M187/UC #2

Please note:

- Detailed information about new additional options, explosion proof markings and installation & service conditions please refer to the datasheet 1.1-183 and the installation and operation manual (IOM) 990.8001 in the download section of our Website.
