

2-way flow control valve Flange- and sandwich construction

- Q_{max} = 48 l/min, p_{max} = 350 bar
- Q_{N max} = 40 l/min

NG4-Mini

DESCRIPTION

Direct operated, pressure compensated flow control valve in flange- and sandwich construction. Flow control screw-in cartridges M22x21,5 acc. to ISO 7789 are installed. In the sandwich plates for A, B and AB line, a bypass check valve for reversed free flow is installed. A bypass non-return valve plate for the flange valve, for free flow from B to A, can be ordered separately. Two flow ranges are available. The flange body is painted and the sandwich plates are phosphatised.

FUNCTION

The 2-way flow control valve is designed to keep the oil flow to any actuator constant irrespectiv of the load.

APPLICATION

2-way flow control valves are used where the supply volume flow has to be kept constant even when the load fluctuates. De-pending on the application, a distinction is made between restricting the forward flow or the return flow. Mini-4 flow control valves are used where hydraulic systems have to be both light and compact.

SCREW-IN CARTRIDGES INSTALLED

The following screw-in cartridges are used in either the flange body or the sandwich body:

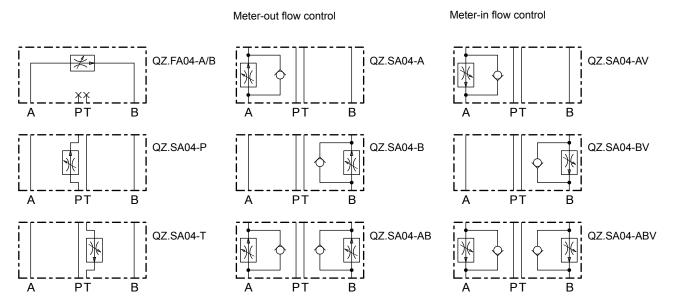

Type QZ.PM22

Designation flow control valve •2-way

Data sheet no.

2.5-535

TYPE CHARTS

By turning around valves with meter-out function, meter-in function can be adchieved:

A turns into BV B turns into AV AB turns into ABV

Valves for flow control are supplied respectively with a sealing plate and an intermediate plate.

REMARK!

Detailed performance data and additional hydraulic specifications may by drawn from the data sheets of the corresponding installed pressure relief cartridge.

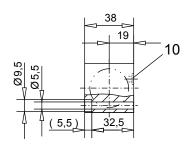

CAUTION!

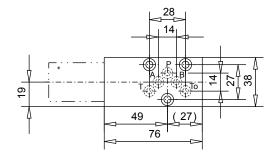

The performace data especially the "pressure-flow-characteristic," on the data sheets of the screw-in catridges refere to the screw-in cartridges only. The additional pressure drop of the flange body respectivly sandwich body must be taken into consideration.
