

**Anti-cavitation check valve
Sandwich construction**

- $Q_{max} = 20 \text{ l/min}$
- $p_{max} = 350 \text{ bar}$

NG6
ISO 4401-03

DESCRIPTION

Sandwich type anti-cavitation check valve NG6 with interface according to ISO 4401-03. The external port x has size G1/8". The steel sandwich plate is phosphated.

FUNCTION

Two spring loaded check valves allow flow passage from external port x to pressure lines A and B. In opposite flow direction they close leak free.

APPLICATION

Anti-cavitation check valves are mainly used in combination with hydraulic motors and brake valves or crossover relief valves. They feed fluid back into the system via port x to compensate for leakage and to avoid cavitation on the low pressure side of the motor.

International mounting interface ISO					
Type code for anti-cavitation check valve					
Nominal size 6					
Design-Index (Subject to change)					

GENERAL SPECIFICATIONS

Description	Anti-cavitation check valves
Nominal size	NG6 acc. to ISO 4401-03
Construction	Sandwich construction
Mounting	4 mounting holes for cyl. screws M5 or studs M5
Connection	Threaded connection plates Multi-flange subplates Longitudinal stacking system
Ambient temperature	-20...+50°C
Mounting position	any
Fastening torque	$M_D = 5,5 \text{ Nm}$ (quality 8.8)
Weight	$m = 1,6 \text{ kg}$

HYDRAULIC SPECIFICATIONS

Fluid	Mineral oil, other fluid on request
Contamination efficiency	ISO 4406:1999, class 20/18/14 Required filtration grade $\beta_{10...16} \geq 75$ refer to data sheet 1.0-50/2
Viscosity range	12 mm ² /s...320 mm ² /s
Fluid temperature	-20...+70°C
Peak pressure	$p_{max} = 350 \text{ bar}$
Opening pressure	$p_{\delta} = 0,5 \text{ bar}$
Max. volume flow	$Q_{max} = 20 \text{ l/min}$

SYMBOLS

CHARACTERISTICS Oil viscosity $\nu = 30 \text{ mm}^2/\text{s}$

$\Delta p = f(Q)$ Performance limit

Δp [bar] $x \rightarrow A$ or $x \rightarrow B$
